WORLDWIDE AEROS GIVES BUSINESS TRAVELERS A LIFT

Worldwide Aeros (booth 7359) officially announced the launch of the Aerocraft ML866 program at NBAA 2007.

The Aerocraft, which looks like an airship, is a new paradigm in air transport – a combination of buoyancy and aerodynamic and propulsive lift. Helium is compressed and expanded as required automatically to control the buoyancy of the ML866.

The versatile Aerocraft can be used as a private air yacht or corporate air vehicle, providing its passengers with more space than any existing business jet. This radical new aircraft might revolutionize business travel.

To meet the needs of the business aviation community, Aerocraft ML866 offers a configuration called the Business Office in the Sky. Equipped with

a state-of-the-art technology package including a computerized office, videoconferencing and communications, the Aerocraft ML866 becomes a high-tech airborne business center.

Another advantage of Aerocraft is the vertical take-off and landing capability and ability to operate from unprepared fields, providing access to remote areas anywhere in the world. The ML866 offers 120kt (220km/h) top speed and over 5,000ft² (465m²) of interior space.

Not just a vehicle to support business on the go, however, Aerocraft also functions as a place to do business when you arrive – offering a conference room that can accommodate up to 100 people while on the ground.
